CYBER SECURITY – BASIC

This course is designed to educate employees on how to protect themselves from digital threats.
It covers the fundamentals of cybersecurity and provides the tools necessary to safeguard personal and business information.

Through targeted modules, participants will learn to identify and prevent cyber risks by adopting best security practices.

Target Audience
The course is intended for all business users.

Implementation Support
This course was developed by MODO with the assistance of a subject matter expert.

Course content

Passwords
This module emphasizes the importance of passwords as the first line of defense against unauthorized access. It explores best practices for enhancing account security.

Generic Phishing
Participants will learn about cybercriminal tactics and how to defend against phishing attempts. This module covers recognizing and reporting suspicious emails, distinguishing between spam and phishing, and identifying spear-phishing scams.

Physical security
This module highlights the importance of good organizational practices in protecting physical devices. Proper management of sensitive documents is key to preventing unauthorized access or information loss

Malware
An in-depth look at different types of malware. Participants will learn to recognize warning signs and prevent infections by keeping software systems up to date.

Surfing the Internet
This module provides strategies for identifying trustworthy websites and using secure connections to avoid fake certifications and other hacker tactics that compromise online security.

Improve your team's cybersecurity skills to effectively protect sensitive information and safely navigate the digital world.

MODO ready-made courses are designed to meet your company's needs.
